**BATTELLE'S COLUMBUS LABORATORIES** comprises the original research center of an international organization devoted to research and development.

Battelle is frequently described as a "bridge" between science and industry — a role it has performed in more than 90 countries. It conducts research encompassing virtually all facets of science and its application. It also undertakes programs in fundamental research and education.

Battelle-Columbus — with its staff of 2500 — serves industry and government through contract research. It pursues:

- research embracing the physical and life sciences, engineering, and selected social sciences
- design and development of materials, products, processes, and systems
- information analysis, socioeconomic and technical economic studies, and management planning research.

Item #20 continued:

editions. Among the features of this third edition of the thesaurus are:

(1) Listing of new or not previously listed pharmaceuticals from the above countries.

(2) Listing of new uses for previously identified pharmaceuticals. It should be noted that pharmaceutical usages as indicated in this thesaurus are those indicated in the literature of the countries involved, and do not necessarily coincide with US usage of the same compound.

(3) Listing of country of origin of both new and previously identified pharmaceuticals whenever possible. The country of origin of the article in which the compound was mentioned is not presumed to be the country in which the compound is marketed under that name. Therefore, many compounds do not have a country of origin listed.

(4) Listing of synonymous names for both new and previously identified pharmaceuticals. In accomplishing this objective two methods have been utilized. In some instances the literature specifically states that two compounds are synonymous. In addition, compounds synonymous to the same compound are considered synonymous to each other. Compounds with the same name but with different chemical formulas are listed as separate pharmaceuticals.

(5) Identification of "drugs of choice" in the USSR. This has been done on the basis of listing of the pharmaceuticals in the 10th Edition of the USSR Pharmacopoeia, and the 1974 Formulary of Physicians by T. N. Tomilina.

Special attention has been given in this edition to identification of pharmaceuticals from the German Democratic Republic and from Czechoslovakia.

## PREFACE

In order to make most effective use of CIRC and other data bases containing information on the pharmacology of the U.S.S.R., east European communist countries, and People's Republic of China, it is necessary to know under what trade names the drugs of interest are marketed in those countries. It is also useful to know for what purposes a particular drug is used in those countries, as their usage of the drug may not be the same as U.S. usage of the same compound. To provide assistance in this area, a thesaurus was developed in 1973, and the first update appeared in 1974. This third edition updates and supercedes all previous editions. Among the features of this third edition of the thesaurus are:

- (1) Listing of new or not previously listed pharmaceuticals from the above countries.
- (2) Listing of new uses for previously identified pharmaceuticals. It should be noted that pharmaceutical usages as indicated in this thesaurus are those indicated in the literature of the countries involved, and do not necessarily coincide with U.S. usage of the same compound.
- (3) Listing of country of origin of both new and previously identified pharmaceuticals whenever possible. The country of origin of the article in which the compound was mentioned is not presumed to be the country in which the compound is marketed under that name. Therefore, many compounds do not have a country of origin listed. The following abbreviations are used (in parentheses) to indicate country of origin:

(BU)	-	Bulgaria
(CH)	-	People's Republic of China
(CZ)	-	Czechoslovakia
(HU)	-	Hungary
(PO)	-	Poland
(RU)	-	Rumania
(UR)	-	U.S.S.R.
(YU)	-	Yugoslavia

- (4) Listing of synonymous names for both new and previously identified pharmaceuticals. In accomplishing this objective two methods have been utilized. In some instances the literature specifically states that two compounds are synonymous. In addition, compounds synonymous to the same compound are considered synonymous to each other. Compounds with the same name but with different chemical formulas are listed as separate pharmaceuticals.
- (5) Identification of "drugs of choice" in the U.S.S.R. This has been done on the basis of listing of the pharmaceuticals in the 10th Edition of the U.S.S.R. Pharmacopia (P), and the 1974 Formulary of Physicians by T. N. Tomilina (F).

As in the previous editions, indication is given of Broader Terms (BT), Narrower Terms (NT), See Also (SA), Synonyms (SY), and Scope Notes (SN). The Thesaurus covers information appearing in the open literature from 1963 to the present.

Special attention has been given in this edition to identification of pharmaceuticals from the German Democratic Republic and from Czechoslovakia.

This thesaurus was prepared for MILA by Ms. Ruth M. Linebaugh, Battelle-Columbus Laboratories.
